MICROFILM CORP.

Methylene Blue
Analysis

CUSTOMER NAME: Misor Corp
ADDRESS: 800 CLARmont Ave Bensalem, PA. 19020

ADDRESS: 400 CHINA MOUNTAIN RD.
Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than () 1.4 ug (micrograms) indicate archival quality, and greater than () 1.4 ug indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

[illegible]

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard Z39.48-1992: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 mg for residual thiosulfate.

QUEENS

[illegible]

A small, tilted image of a document page, possibly a calendar or a form, showing a grid of numbers. The numbers are arranged in a 3x3 grid, with the top row containing 1, 2, 3, the middle row containing 4, 5, 6, and the bottom row containing 7, 8, 9. The image is rotated approximately 45 degrees clockwise.

QUEENS

A close-up photograph of a postage stamp. The stamp features a grid of large, bold, black 'F' characters on a light background. The grid is partially visible, showing several rows and columns of the letter. The stamp is slightly tilted and appears to be on a textured surface.

MICROFILM CORP.

Methylene Blue
Analysis

CUSTOMER NAME: Micor Corp
ADDRESS: 800 Claremont Ave. Bensalem, PA. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 mg (micrograms) indicate archival quality, and greater than (>) 1.4 mg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD (<) 1.4 mg	DOES NOT MEET ANSI STANDARD (>) 1.4 mg
MARRIAGE Bureau 1948-49	.14	✓	

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard 19.1-MS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 mg for residual thiosulfate.
